EDUCATION

McMaster University – Bachelor of Engineering in Software Engineering

2025

SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, SQL
- **Frameworks and Tools:** React, Flask, Django, Next.js, FastAPI, AWS, Google Cloud, Shopify Hydrogen, SAP S/4HANA, JIRA

EXPERIENCE

Founding Engineer, BaseNote Solutions LTD – United Kingdom (Remote)

Jan 2026 – Present

- Sole engineer designing and building a multi-tenant SaaS ERP platform for perfumers, spanning inventory management, production workflows, and client storefronts end to end.
- Built Blend Engine and Alchemy Engine, RAG-based AI assistants that recommend perfume-oil blends and fragrance-chemical formulations by querying a proprietary knowledge base of in-house chemists' experimental data.
- Delivering the pilot Blend Engine application for the company's first licensed client, owning architecture, implementation, and rollout.
- Launched a custom Shopify Hydrogen storefront for a white-label perfume client, integrating it with the company's production and fulfillment services.

Head of Product and Engineering, Icon Train Smarter LTD – United Kingdom (Remote)

June 2025 – Present

- Own product and engineering for Icon Training, an AI-powered fitness app where trainers and athletes create AI avatars of themselves that users subscribe to for coaching; led the product from initial MVP to production-ready launch.
- Direct frontend and backend teams through Agile sprint cycles as the hub between business goals and technical execution, setting product direction and making architecture and implementation decisions with developers.
- Grew the team from 2 to 8 employees, owning full-cycle recruitment from job ad through interviews to contract signing, alongside payroll and day-to-day operations.
- Contribute hands-on to delivery by implementing AI-related features and building the company website (icontraining.app).

SAP Analyst, S/4HANA Key User (Co-op), Sanofi Pasteur – Toronto, ON

Sept 2023 – Aug 2024

- Eliminated a growing backlog of 255 S/4HANA–EWM inter-system interface errors, driving it to 0 and cutting average resolution time to under 1 day, through root-cause analysis with AMS and functional experts across supply chain and manufacturing.
- Authored documentation for each error class covering cause, prevention, and resolution steps, enabling recurring errors that previously blocked production to be prevented or resolved without escalation.
- Resolved a long-running production blocker that functional experts and AMS engineers were unable to debug, inventory stuck in manual stock movements after QA inspection, by tracing it in staging to incorrect storage-temperature settings in bin configuration.

IT Intern, Eastern Bank PLC – Dhaka, Bangladesh

May 2023 – Aug 2023

- Led the Business Intelligence team in reports migrated during a 1,800-report migration from SAP BusinessObjects to a new Oracle ERP, and created processes that streamlined the team's migration workflow.
- Contributed to development, product direction, and sprint breakdowns for EBL's new mobile banking app, working alongside app developers and project managers in a rotational program.

PROJECTS

ID8 – AI Application Generator (*Python, FastAPI, Next.js, Google Gemini, Google Cloud*)

github.com/RafeedIqbal/id8

- Built an AI-powered application generator that turns natural-language prompts into production-deployed web apps through a 10-stage orchestration pipeline (PRD → design → code → security scan → PR → deploy).
- Architected an idempotent, resumable state machine (keyed by run ID + node) in FastAPI with an async SQLAlchemy 2.0 / PostgreSQL backend, integrating Google Gemini and native GitHub, Vercel, and Supabase REST APIs to automate PR creation and deployment; managed user API keys with Google Cloud Secret Manager.

SyncMaster – Documentation Management System (*TypeScript, Python, AWS*)

github.com/RafeedIqbal/SyncMaster

- Developed a documentation management system for the City of Hamilton's PMATS as part of a 5-person capstone team, with a TypeScript frontend and Python backend.
- Provisioned AWS resources using infrastructure-as-code and built CI/CD pipelines through scripted workflows.
- Contributed to a codebase spanning 1,200+ commits, following standards for contribution, code review, and testing.
